## DETAILED ACTION

### *Claim Rejections - 35 USC § 112*

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, line 3, "the flat side" lacks antecedent basis.

Claim 3, line 2, "the intended axial direction" lacks antecedent basis.

Claim 4, line 2, "the intended axial direction" lacks antecedent basis.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3,5,6,13,17 and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Havard et al. (U.S. Patent 5483034).

Havard et al. disclose (Fig. 2): Regarding Claim(s) 1, a method for manufacturing a stator or rotor component which is intended during operation to conduct a gas flow, comprising:

providing a first wall part (2) having one edge (2C) bearing against the flat side (1A) of a second wall part (1), extending in radial direction of the component, in such a way that the first wall part extends in circumferential direction of the component, and in that the edge of the first wall

part is then laser-welded to the second wall part in the circumferential direction, from an opposite side of the second wall part in relation to the first wall part in such a way that joined-together portions of the wall parts form a T-shaped joint (9) (Figs. 1 and 2) ; Regarding Claim(s) 2, the first wall part is placed essentially perpendicular to the flat side of the second wall part; Regarding Claim(s) 3, the second wall part is arranged such that it also extends in the intended axial direction of the component; Regarding Claim(s) 5, the second wall part extending in the radial direction, is arranged so as to limit a gas duct (col.1, line 16) in the circumferential direction of the component; Regarding Claim(s) 6, the second wall part is arranged such that it has the essentially radial widening for guidance of the gas flow and/or transmission of load during operation of the component; Regarding Claim(s) 13, the first and second wall part are arranged between an, in the radial direction, inner and outer ring element ; Regarding Claim(s) 17, the stator or rotor component is intended for a gas turbine; and Regarding Claim(s) 18, the stator or rotor component is intended for a jet engine (col.1, line 28).
